SHAREPOINT MIGRATION SERVICES

If your business is still using the 2010 or 2013 version of SharePoint, then the stability, security and usability of your solution could be at risk.

Our experienced team of software consultants are market-leading experts in delivering SharePoint migration solutions. We build bespoke SharePoint solutions tailored to your business' unique needs and requirements, providing an engaging digital experience that complements your other key Microsoft products.

Secure and seamless operating

Although your existing SharePoint offering may appear to be working fine, any technical issues or bugs it may later encounter could leave you vulnerable to security breaches.

This is due to SharePoint 2010 and 2013 reaching the end of their support lifecycle – in other words, Microsoft will no longer address any of the issues that occur on these platforms. Therefore, businesses that are still using SharePoint 2010 or 2013 to store their masses of sensitive information could later face serious problems from a GDPR and data security perspective.

Even if your organisation relies upon an on-premises or hosted solution, migrating to a flexible alternative such as SharePoint Online can be a cost-effective way of ensuring enhanced collaboration for users – no matter where they are physically working.

With a wide range of short and long-term benefits to explore, the main concern that businesses have when considering a SharePoint migration is the disruption to their business. However, our experienced consultants are here to do all the heavy-lifting so that you and your team can continue daily operations without feeling stressed or overwhelmed.

Ensuring a smooth transition

Rather than 'lifting and shifting' the existing solution, Circyl will take a closer look under the bonnet of your business to assess their current position, making recommendations based on your needs and objectives.

When tackling migrations, Circyl often rebuild many of the existing Intranet pages, optimising them so that they take advantage of SharePoint Online's enhanced functionality and additional features.

Once completed, all the necessary documents and content can be migrated, with custom functionality rewritten – this includes recreating outdated functionality that no longer exists in SharePoint Online, including Wiki, blogs and Meeting Workspace, whilst reconfiguring old workflows to Power Automate.

If you wish, during the migration, Circyl will help organise your information and clear up any existing confusion by removing duplicate documents, compressing others and OCR all scanned documents. Additional metadata will then be added, allowing them to be filed and found with ease.

Of course, Circyl's consultative approach means that all decisions will be made in collaboration with you, seeing that the necessary integrations are made to ensure a smooth and stress-free transition for all users.

What can you expect?

- Series of specialist workshops and consultations to determine the scope of the project
- Clear roadmap that will ensure the proposed migration meets your unique business needs and requirements
- Comprehensive rebuild and refresh of existing Intranet pages (these cannot be simply migrated)
- Full and thorough migration that includes the reconfiguration of outdated processes and functionality
- Complete tidy-up of existing documents, ensuring they are properly organised and accounted for
- Ongoing support from Circyl's in-house team of technical experts to confirm the new solution is operating as intended
