

SharePoint Migration

If you are using SharePoint 2019, 2016 or earlier versions then the stability, security and usability of your solutions could be at risk as these products have all ended mainstream Microsoft support.

If you have thousands of files stored on legacy file servers that have become increasingly difficult and costly to support, back-up, secure, and ensure compliance with standards such as ISO 27001, there is a solution that future-proofs your organisation against evolving challenges and regulatory requirements.

SharePoint Online

Our experienced team of software consultants are market-leading experts in delivering SharePoint migration solutions. Whether upgrading from previous versions of SharePoint, moving content from legacy file servers or both, Circyl can help you.

We build bespoke SharePoint solutions tailored to your business' unique needs and requirements, providing an engaging digital experience that complements your other key Microsoft products.

Secure and seamless operating

Businesses that are still using older versions of SharePoint or legacy file servers to store their masses of sensitive information could later face serious problems from a GDPR and data security perspective.

Even if your organisation relies upon on-premises servers for hosted solutions or files, migrating to a flexible alternative such as SharePoint Online can be a cost-effective way of ensuring enhanced collaboration and integration with Microsoft Teams for users – no matter where they are physically working.

With a wide range of short and long-term benefits to explore, the main concern that businesses have when considering a SharePoint migration is the disruption to their business. However, our experienced consultants are here to do all the heavy-lifting so that you and your team can continue daily operations without feeling stressed or overwhelmed.

Ensuring a smooth transition

Rather than 'lifting and shifting' existing solutions and files, Circyl will take a closer look under the bonnet of your business to assess the current position and permissions and make recommendations based on your needs and objectives.

When tackling migrations, Circyl optimise SharePoint Online to take advantage of enhanced functionality and additional features.

Once all the necessary documents and content have been migrated, any custom functionality required such as apps and workflows can be applied using technologies like Power Apps and Power Automate.

If you wish, during the migration, Circyl will help organise your information and clear up any existing confusion by removing duplicate documents, compressing others and OCR all scanned documents. Additional metadata will then be added, allowing them the files and documents to be filed and found with ease.

Of course, Circyl's consultative approach means that all decisions will be made in collaboration with you, seeing that the necessary integrations are made to ensure a smooth and stress-free transition for all users.

Copilot Ready

Only by migrating your documents and files from older SharePoint versions or legacy file servers to SharePoint Online can you unlock the full potential of cutting-edge tools like Copilot and ChatGPT. With billions being invested in generative AI technologies by companies like Microsoft and OpenAI, optimising your digital infrastructure ensures you're ready to harness the efficiencies these innovations bring.

"With our focus on safeguarding data and optimising operations, maintaining high standards of security and efficiency is essential to our success. As our client base expanded, the need for greater automation in our onboarding and offboarding processes became clear. We recognised that our SharePoint setup required an upgrade to meet these growing demands and ensure our data handling practices remain secure and robust. Circyl's expertise in SharePoint and automation made them the ideal partner to help us achieve these goals, and Callum's attentive follow-up throughout the process has made us feel like a priority. His commitment to understanding our needs and ensuring we have the support required has been invaluable to our decision to move forward."

Katrina Leach, Head of Operations
DPO Resource Centre

What can you expect?

- Series of specialist workshops and consultations to determine the scope of the project
- Clear roadmap that will ensure the proposed migration meets your unique business needs and requirements
- Comprehensive Intranet including sites, pages, document libraries and navigation
- Full and thorough migration that includes the reconfiguration of outdated processes and functionality
- Ongoing support from Circyl's in-house team of technical experts to confirm the new solution is operating as intended

Best tools to enhance your SharePoint Migration

LinkFixer Advanced is not only the best link mapping tool on the market, in terms of preserving links and automatically fixing links in massive batches of thousands at a time, it's the only tool on the market. It provides a unique method of determining which files are connected, where these need to exist and when those connections break during a migration or renaming action, and all within an easy-to-use platform.

Sharegate

This migration tool packs a powerful set of features that make big migration projects easy. Migrate to Microsoft 365, move channels in Teams, merge tenants – get everything you need for a successful migration (and more), plus unlimited support.
